Steel for Housing

Two-fold Benefit for Terrance

That steel houses are not mere fantasy, but that their use is certain to become a reality in just a short period of time, was expressed by W. E. Emmett of the American Institute of Steel Construction at the annual conference of Iron, Steel and Allied Industries of the Pacific Coast at Del Monte recently.

That their use would be of immediate benefit to Torrance is soon realized by residents of this community in which the steel industry is the principal factor for commercial existence.

The use of steel houses would not only be beneficial for the direct result of increased production, however. Improved housing in this community, which could be aided by the neighboring facilities, would prove of infinite assistance in creating of Torrance a much more progressive town.

The very battle cry of "steel houses for Torrance," a slogan city might well be considered by those who have the welfare of this community at heart. There is no doubt but that the opportunity of taking advantage of this new mode of housing is but a brief step in time from reality.

Healthy America?

Citizens Tend To Neglect Welfare

Over a million people die annually in this country, and nobody has any idea how many are born. According to one of the latest available death census records, compiled by statistics from the registration area (about 75 per cent of the United States), 11,165 people died in one year of "senility." Many of these persons, who were reported to have been cut off by old age probably had some more vital ailment, unnecessary and uncurable, which was not shown.

Some years ago, tuberculosis was the most dreaded disease. That was before improvements were made by medicine and public welfare groups to prevent it. The dark horse team of pneumonia and influenza were also listed among the most dangerous maladies. Recently deaths from heart ailments have shown an alarming gain. They claim entirely too many victims.

This tremendous death rate is one of the nation's most vital problems needing immediate attention. The fast pace Americans have set for daily routine is a killing one. An important element at the root of a rising rate in man's procrastinating attitude toward his own self-preservation. Men appear to have no time for such trivial matters as checking their physical well-being. Economic problems and affairs of the purse demand their attention. Why have a physical examination when you feel all right, they argue. Yet, such care would go far toward the prevention of death. The expenditure of a small amount of money yearly for medical precaution would save much in the long run.

Certainly if county officials consider it their duty to supply free medical attention to those unable to pay, more fortunate citizens should pause to consider the necessity for good health. An alarming situation might thereby be averted.

Commendation For Boy Scout Movement

Torrance along with the rest of the nation paid homage to the world's outstanding movement among youth last Friday night, when its citizens listened by radio to President Roosevelt speak upon the occasion of the 25th anniversary of the founding of the Boy Scouts in the United States.

The year 1910 saw this international plan to aid the boy in obtaining the correct start in life gain a foothold in this country. The year 1935 sees the world admiring that the success of the Boy Scouts lies in more than the mere fact that roving bands of marauding rowdies are now at a minimum. The knowledge that a majority of Rhodes scholars, all-American football players and outstanding younger national leaders were once enrolled as Scouts, combined with the statistics which show that the pell-mellaries seldom receive a subscriber to the Oath and Law, earns the acclaim of a grateful nation.

To the Boy Scouts of America, on the occasion of 25 years of success, Torrance joins in wishing continued growth to this movement of extreme civic benefit.

Co-operative Lecture

Small Forest Fire Loss
SPRINGFIELD, Calif. (UPI)—At the end of the 1934 fire season a survey revealed that only 26 acres of forest land were burned in the San Gabriel National Forest. It was the smallest fire loss in the state. A total of 1,632 acres of Colorado forest was destroyed by fire during 1934. The heaviest loss was in the Roosevelt Forest, where 316 acres were burned.

Spring Has Arrived In Torrance

Spring, personnel census of
population, grabbed a firm hold
on the Torrance-Lomita area this
week, a direct effect of the rains
of the preceding period. Appearance
of wild flowers in various lots
and the absence of undesignated
land was noticeable, giving an
added complexion to the section.

Puppies and owl's chirps were
common of the unadulterated flower
life of the week, posed their
heads above the green surface,
and previously unacquainted eyes of community residents were
instantly attracted to the natural surroundings.

Children, as well as adults, re-
solved this stimulus and little
bands were observed clipping simple bouquets for mothers while
these last whistled homewards.

Animal assistance was given in
this symphony of nature, and the singing of common California
birds, but recent arrivals from a
farther warmer habitat, blended into the atmosphere.

For Spring has once again
ascended its throne in Torrance-Lomita.

STORY 3

Continued from Page 1

this demand through increasing
the bed space.

The beds, which are arranged in
two double bunks, at the bottom
in a train, are composed of a
mixture of thoroughly "molded"
manure, wheat straw, and man-
ure loam. The sheaf housing
these beds, which are about three
feet wide, are dark and humid.
The temperature is kept at 58
deg. F. and the humidity at about
85 deg. When the atmosphere be-
comes too dry, the manure is
dusted only independently, sheets of
wet burlap are hung in the ashes
to cool and moisten the air. Thus
protecting the beds is assured, and
the conditions develop solidly
without becoming too moist.

Some time after the planting
the mushrooms appear at the level
of the bed as small brown nodules.
For ten or 12 days there is no
apparent change, then suddenly
the white or cream colored heads
push their way up and begin to
grow rapidly. These mushrooms
grow as fast as the height of the
season that a picker may gather
from a pound to a pound and a
half from one square foot. From
the hole left by the picked mushroom,
as many as 10 or 12 other
mushrooms will appear consecutively,
as the hole is filled with
more loam after each picking.

To take all possible precautions
for eliminating bugs or worms
from the mushroom beds, large piles of
straw are burned when the beds are
first installed after the "cooling,"
by which all animal and
vegetable impurities are removed
from the manure. After the mushrooms
start to grow the beds are
sprayed occasionally with para-
mum powder which, although non-
injurious to humans, is fatal to
small insects. This powder is
made from the painted dunes
mushrooms high in protein content
are a suitable substrate for
meats, dinner or seafood. Millard
explained, and one of his hybrids
contains more food value than a
new puppy.

Mr. and Mrs. Millard have one
son, Billy, aged four, who is an
ardent mushroom enthusiast.

He's a New Father—At 78

dren older
than his wife.

Further Factories Are Expected for L. A. County Area

Location of the \$2,000,000
Hughes-Michelin plant in the Tor-
rance industrial district probably
will mean that other similar
manufacturing plants will be an-
ticipated in Los Angeles county
according to Los Angeles County
Chamber of Commerce.

The chamber took credit for
obtaining the Hughes-Michelin
plant in letter to the board of
supervisors, requesting that nothing
be done to cut the county's
expenditure fund that makes pos-
sible the chamber's activity in this
respect.

Attention was called to the 300
persons the plant was expected to
employ, as soon as it is com-
pleted and in operation, which will
be shortly.

ANNE GUTHRIE

Not So Funny

Adeline Neville, famous transport
pilot and stunt aviator, thinks the
old job of the refractory folding
bed isn't so funny. It happened to
her. While reading in bed in her
Los Angeles apartment, the folding
contraption collapsed and she
suffered severe head injuries.

Ford Deliveries Increase 110% Over Jan., 1934

DETROIT, Mich., Feb. 14.—
Domestic retail deliveries of Ford
V-8 cars and trucks for January
totaled 75,678 units, an increase
of 110 percent over deliveries for
the same month of 1934. It was
announced today at the home
offices of the Ford Motor Company.
This is the highest total
for any January in the past five
years. It also exceeds deliveries
in the combined months of Janu-
ary and February of last year.
Deliveries in January this year
were exceeded in only three
months in 1934. They were April,
May and June, which are usually
considered the peak months of the
spring selling season.

Retail deliveries of Ford V-8
trucks were higher than for any
January since 1921.

The Ford Company recently an-
nounced its January world pro-
duction of V-8 cars and trucks
totaled 185,130 units. Domestic
production for February has been
set to exceed that of January.
Present production of Ford V-8
units is in excess of 5000 daily.
